EXPERIENCE

Software Engineer | Independent / Freelancer | Lagos, Nigeria

04/2023 - Present

- Architected PairSync's shared core package reused across Tauri desktop and Expo mobile, eliminating triplicate platform logic and cutting per-feature delivery time.
- Engineered LAN peer discovery over UDP-multicast + mDNS with heartbeat liveness, sustaining 80% of local-network bandwidth with zero cloud relay or accounts.
- Architected a layered DDD fintech application — AV-Daily, a security-first financial app, with biometric auth (Face ID/fingerprint), using Effect.ts for typed error handling and concurrency to keep money-movement flows correct under failure.
- Engineered an idempotent transaction ledger handling contributions, withdrawals, interest accrual, referral bonuses, and constrained reversals — with negative-balance prevention, source-attributed audit logging, and $O(\log n)$ aggregate analytics, reducing balance-query cost from $O(n)$ scans and eliminating double-post errors under retry/webhook replay.

Software Engineer | Screenstack. | London, UK (remote)

03/2026 - 08/2026

- Developed and launched a production-ready full-stack application using Nestjs & Nextjs, from concept to an MVP launch, for ScreenStack dashboard application
- Architected a multi-tenant organization subsystem — self-serve creation with plan limits, ownership transfer, and safe cascade deletion with last-org guards — by designing shared Zod DTO contracts and coordinating server + dashboard changes to keep each layer independently reviewable.
- Built the interview-operations dashboard (org-wide loops endpoint, RSC prefetch, timezone- and window-aware filtering, onboarding gating), cutting client round-trips via server-side data hydration and Query cache invalidation.
- Owned and hardened a shared design-system UI library and authored an automated design-system audit script to enforce visual consistency across apps.
- Mentored and paired with teammates across a number of collaborative feature rollouts and a review-gated PR workflow, upholding team engineering standards through the Conventional Commit compliance and consistent code review.

Software Engineer | Aduro Creative Ltd. | London, UK (remote)

04/2021 - 03/2022

- Developed and launched a production-ready React application using TypeScript, from concept to launch, for RedWhale UK, Unibeez.
- Built scalable, reusable UI components for a medical education platform, leveraging TypeScript for enhanced type safety and maintainability.
- Implemented comprehensive quality assurance testing, ensuring cross-browser compatibility and mobile responsiveness across multiple projects.
- Led accessibility initiatives, documenting best practices and improving user experience, demonstrating project

management and technical leadership skills.

Frontend Software Engineer | LawPavilion | Lagos, Nigeria

07/2020 - 01/2021

- Architected core application modules to improve performance and load times, employing efficient data structures.
- Built reusable UI components for the application, enhancing development speed and consistency.
- Achieved significant performance gains via lazy loading and separation of heavy computations to a worker instance, demonstrating proficiency in System Design and Web Development.

Software Engineer | Tete (Contract) | Lagos, Nigeria

10/2020 - 11/2020

- Developed a full-stack application using React, Redux, Node.js, and PostgreSQL, implementing robust data models within relational databases.
- Architected and implemented key features, leveraging JavaScript for frontend and backend development, improving data processing efficiency.
- Facilitated Scrum adoption, resulting in a 20% increase in team velocity and improved product quality.
- Designed and implemented the application state machine for the Admin platform using JavaScript and PostgreSQL, ensuring data integrity within the relational database.

Software Engineer | Hourly | London, UK (remote)

09/2019 - 03/2020

- Implemented intuitive user interfaces using knowledge of serial communications to improve user experience.
- Collaborated with my teammates to build a robust and scalable data scraping service.
- Implemented an application state management architecture to handle the complex state of the frontend application.

Software Engineer | Andela | Lagos, Nigeria

02/2019 - 09/2019

- Worked with clients' application and product development teams, implementing software solutions for both web and mobile technologies.
- Assisted in designing solutions architecture using third-party application program interfaces, services and software libraries.
- Actively sought and assessed new technology solutions to challenges identified by clients.
- Engaged in ongoing training and professional development as directed by the Company.

Frontend Software Engineer | Tulaa | Nairobi, Kenya (remote)

05/2019 - 08/2019

- Developed and maintained the frontend of a Customer Relations Management application (Angular 8), supporting 25,000+ users.
- Optimized data visualization using advanced charting techniques, improving data analysis workflows; leveraging Computer Science principles for efficient data representation.
- Implemented lazy loading for microservices and components, reducing application load time by 30% using Computer Science best practices.
- Mentored junior developers, leading coaching sessions, demonstrating strong leadership and Computer Science expertise.

Full-Stack Web Developer | Freelance

04/2017 - 03/2019

- Worked as a freelancer on multiple projects which included an e-commerce web app developed with React.js having features such as a geolocation system using Google Maps to help sellers and buyers locate each other..
- Worked on a real-time chatting application for the terminal using a web socket for sending and receiving messages.

EDUCATION

Federal University of Technology Owerri | Nigeria
B.Eng | Civil Engineering

2015 - 2018
